Description of works

The Tenero CST5 swimming pool project, a new replacement building, includes a series of swimming pools arranged on a slightly elevated platform and divided into an indoor and an outdoor section.

The tendered project covers only the execution of the structural works.

The complete project comprises the following main categories of works to be carried out:

- Piles
- Earthworks
- Concrete structures and prefabricated elements (works included in this contract)
- Steel constructions
- Technical installations
- Finishes
- Landscaping works

Project features

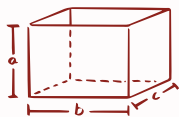

The construction activities are divided into two main phases:

- Phase 1: construction of the indoor pools
- Phase 2: construction of the outdoor pool

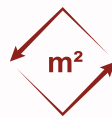

The complex includes:

- A changing room area with a counter-current swimming pool, administrative offices, changing rooms, and a spa area
- A diving pool with springboards at various heights
- An Olympic swimming pool
- A multipurpose outdoor pool

Main quantities

Reinforced concrete:
approx. 15,000 m³

Yellow pool:
approx. 15,000 m²

Reinforcement steel:
approx. 1,800 tonnes
